

WHY GET VACCINATED?

Vaccinations save lives. You get vaccinated for:

Scan
for a
translation

- 1 Yourself**
You won't become ill
or the illness will be
milder.

- 2 The people closest to you**
To avoid infecting
your family, friends and
the people you care for

- 3 The population as a whole**
To protect everyone

WHY GET VACCINATED?

1

YOURSELF

Vaccination provides three important benefits for you:

- Your body can **fight off bacteria and viruses** more effectively.
- You **won't become ill or the illness will be milder**.
- If you still become ill, you will **recover more quickly** and are less likely to have further symptoms after recovery.

2

THE PEOPLE CLOSEST TO YOU.

If you don't become ill yourself or the illness is milder, you're less likely to pass it on to people around you. Vaccinations therefore protect the people you love:

- Your **partner**
- Your **family**
- Your **friends**
- People you **care for**.

3

THE POPULATION AS A WHOLE

Vaccinations help **everyone around you**:

- By getting vaccinated, you're making sure that diseases **are not passed on to others as quickly**.
- That way, you're also protecting **everyone who can't get vaccinated themselves**.
- Fewer and fewer people will then become ill and **diseases will disappear**.
